Big Bore Rifle & Small Bore Rifle (200 meter)

Targets scaled to be "visually correct" when all targets are placed at 200 meter.
The percentage in the silhouette indicates how much it was resized, based on the original size for Big Bore Rifle.
Small Bore Rifle targets are visually the same size as Big Bore Rifle targets, since they are 1/5 (20%) of the size and are placed at 1/5 (20%) of the distance.
